

PLOW MAINTENANCE

PRESEASON CHECKLIST

READY
TO
FLOW!

NEED TO
REPAIR/
REPLACE

- Check trip springs and tighten locknuts
- Inspect cutting edge for wear and tear
Replace if worn 4+ inches on a straight plow or 2+ inches on V-shaped plow
- Check mounting bolts (and check again after first job of season)
- Ensure lift piston is fully retracted and check hydraulic fluid level
Replace dirty fluid only with manufacturer-approved fluid
- Check hoses, couplers and rams for damage, rust or leaks
- Grease pivot pins and king bolt
- Make sure vehicle's electrical system is up to spec for plow
- Check battery and clean battery terminals

NOTES:
